

MAGNET ELEVATOR ME-09

Description:

The ME-09 magnet elevator is a perfect supply of metal lids to the TO-05 Twist-off machine. The stock bunker is filled with metal lids. The lids are transported upwards by a magnetic elevator belt. Depending on the capacity there is a sensor that detects the lids. The lids that are wrong are blown off the magnetic belt and fall back into the stock bunker. The remaining lids are guided through a guide to feed the twist-off machine. The machine is easy to empty before changing to a different lid format.

Film: [LVS Magnet Elevator Belt 09 - YouTube](#)

Advantages:

This very stable and robust machine is extremely user friendly and easily accessible for adjustment, maintenance and cleaning.

Perfect supply for the Twist-off machine.

ME-09-06 type works without using compressed air.

Options:

For even faster changing to other lids the ME-09-12 and ME-09-18 can be delivered with a 3 compartment stock magazine.

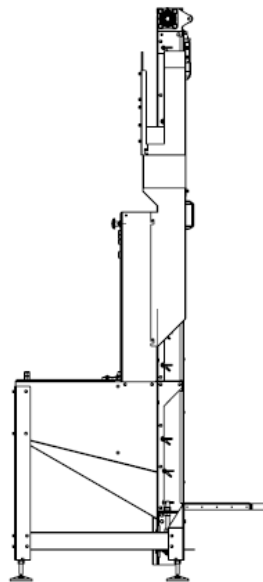

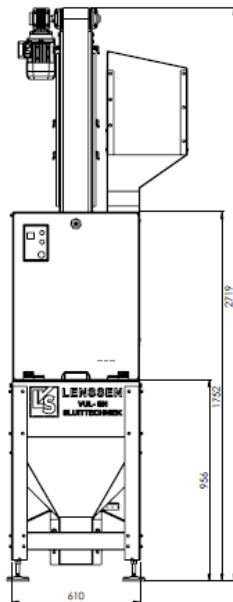

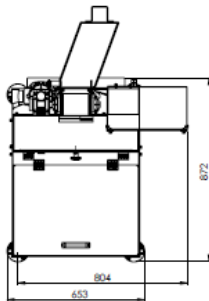

Extension when the elevator belt cannot stand directly next to the TO-machine.

The ME-09-12 and ME-09-18 are available in left and right version.
